P00 -- Half Quick -- Wiki design plan  
2021-10-26

- View page with edit button that goes to edit page.
- Edit page with save button that then goes to the view page.
- Database that holds the information for each page

Page Name	Data (Separate parts?)
-----------	------------------------

- Maybe a history database to keep track of changes to the wiki and go back if necessary.

Time Of Change	Page Name	Data
----------------	-----------	------

Materials and Uses:

- HTML for front end rendering
- Flask serves as middle man between HTML and Python, allowing for site functionality
- Database/Sqlite allows for saved site edits -- essential to a wiki
